

Barclays, Lloyds, UBS Among Banks Picked by UK FCA for AI Tests

April 21, 2026 - 12:30

 2 minutes

(Bloomberg) — Barclays Plc, Lloyds Banking Group Plc and UBS Group AG are among the latest group of lenders in the UK authorized to develop and test out real-world artificial intelligence applications, according to the Financial Conduct Authority.

The tier-1 banks will join the FCA's AI Lab program designed to assess risks and help develop secure tools for consumers and markets in the absence of codified rules, the British banking watchdog announced at the Innovate Finance Global Summit on Tuesday. They will explore models ranging from agentic AI to so-called neurosymbolic AI that blends machine learning with structured reasoning, the FCA said in a statement.

“We’re continuing to collaborate with firms to support the safe and responsible development of AI in UK financial markets,” Jessica Rusu, the FCA’s chief data, information and intelligence officer, said in the statement.

Lloyds has been one of the lenders in regular dialog with the FCA on how to deploy AI safely, including around the potential uses such as financial guidance. Britain’s largest mortgage lender used thousands of its staff as guinea pigs for an AI financial assistant it’s designed to help customers manage their spending, saving and

GoCardless and Palindrome. Due to conclude by the end of this year, the tests will be done in a controlled live-market environment involving real customers, the FCA said.

A previous cohort that included NatWest Group Plc, fintech firm Monzo Bank and Lloyds' pension unit Scottish Widows had tested applications for about six months.

Separately, UK regulators, the Bank of England, the government and the National Cyber Security Centre are working closely to weigh potential risks posed by Anthropic's as-yet unreleased AI model Mythos, which could herald a new era of cyber attacks, according to a person with knowledge of the discussions. Earlier, this month, US Treasury Secretary Scott Bessent summoned Wall Street executives to an urgent meeting to make sure they were aware of possible future threats from the technology.

FCA announces second cohort for AI Live Testing

[Press Releases](#)

First published: 21/04/2026

Last updated: 21/04/2026

Speaking at UK FinTech Week, Jessica Rusu, chief data, information and intelligence officer at the FCA, has confirmed the second group of firms selected to join AI Live Testing.

Eight new firms, including Barclays, Experian, Lloyds Banking Group (Scottish Widows), and UBS, have been chosen by the FCA to live test AI applications to support safe and responsible deployment.

The FCA is working with its technical partner Advai, a London-based specialist in automated AI assurance, to provide [AI Live Testing](#). This initiative helps successful applicants explore key questions around risk management and live monitoring to support the responsible deployment of AI for consumers and markets.

Applications reflect the fast-evolving nature of the technology, with a diverse range of AI models underpinning use cases – from agentic AI and small language models to emerging solutions such as neurosymbolic AI. Firms in the second group are testing both customer-facing and business-to-business use cases, including AI-enabled targeted support for investments, credit score insights for consumers, agentic payments, anti-money laundering detection, and Know Your Customer.

'We're continuing to collaborate with firms to support the safe and responsible development of AI in UK financial markets,' said Jessica Rusu, chief data, information and intelligence officer at the FCA. 'With tailored support from the FCA and Advai, the initiative reflects our

learning from firms engaging with its [innovation services](#).

The FCA's [Regulatory Sandbox](#) and [Innovation Pathways](#) saw a 49% increase in applications on the previous year.

The report also shows that fintech market activity closely matches demand for the FCA's innovation services, particularly in fast-growing areas like AI.

Applications for the AI Live Testing second cohort opened in January 2026, with firms beginning testing in April. Testing will conclude by the end of the year, with an evaluation report published in Q1 2027.

Notes to editors

1. The full list of firms in the second cohort are as follows: Aereve, Coadjute, Barclays, Experian, Go-Cardless, Lloyds Banking Group (Scottish Widows), UBS and Palindrome.
2. In September 2025, the FCA published a [Feedback Statement](#) on the potential benefits, opportunities and challenges raised by our proposal for AI Live Testing.
3. The FCA set out how we are working to accelerate digital innovation in our [response to the Prime Minister's letter \(PDF\)](#), including that we would avoid additional regulations for AI by relying on existing frameworks.
4. Read more about [how FCA rules apply to AI](#).
5. Read [Jessica Rusu's speech at UK FinTech Week](#).
6. In January, the FCA launched a [review led by Sheldon Mills](#) into the implications of advanced AI on consumers, retail financial markets and regulators.
7. Advai is a UK-based AI company specialising in automated testing, evaluation and assurance of AI systems, providing independent technical evidence so organisations can deploy AI safely and confidently at scale.
8. Firms in the [first group](#) included: Gain Credit, Homeprotect, part of the Avantia Group, NatWest, Monzo, Santander, Scottish Widows, part of Lloyds Banking Group and Snorkl.
9. The [Innovation Insights](#) report aims to support earlier regulatory engagement and strengthen evidence-led policy and supervision under the FCA's Strategy 2025–2030.

This report provides a detailed data centric analysis of regtech industry, covering market opportunities and risks. With over 50+ KPIs at country level, this report provides a comprehensive understanding of regtech market dynamics, market size and forecast, and market share statistics.

The RegTech landscape in the USA is rapidly evolving, driven by technological advancements and increasing regulatory pressures. As organizations seek to enhance their compliance capabilities, the demand for innovative RegTech solutions will continue to grow. While challenges such as funding limitations and regulatory complexity persist, opportunities for collaboration and growth abound. By embracing advanced technologies and fostering partnerships, the American RegTech sector is well-positioned to become a global leader in regulatory innovation, benefiting organizations, regulators, and consumers.

Reasons to buy

- Gain comprehensive Market Insights: Access detailed analyses of RegTech spending across various industries, including banking, healthcare, and retail. This understanding will enable you to allocate budgets effectively and prioritize investments based on market demand.
- Product and Technology Breakdown: Explore various RegTech products, such as identity verification solutions, compliance management platforms, and fraud detection systems. Insights into the adoption of technologies like AI, blockchain, and RPA will inform your product development and integration strategies.
- Industry-Specific Applications: Gain tailored insights on how different sectors implement RegTech solutions. By examining industry-specific needs, you can better align your offerings to meet regulatory requirements and enhance operational efficiency.
- Market Share and Competitive Analysis: Understand the competitive landscape through in-depth market share analysis among RegTech companies. This information will assist in identifying potential partnerships and benchmarking your organization against key market players.
- Deployment Models and Compliance Focus: Review various deployment options, including on-premise, hybrid, and service models, to determine the best fit for your organization. Additionally, grasp the regulatory landscape to ensure compliance management strategies are both proactive and effective.

Trends in RegTech

Recent trends in US RegTech emphasize a shift toward automation

- **Adoption of AI and Machine Learning:** Companies increasingly leverage AI and machine learning to automate compliance tasks, improve risk management, and enhance data analysis capabilities. This trend allows for real-time monitoring and proactive risk mitigation, significantly reducing the potential for human error.
- **Focus on Cybersecurity:** With the rise in digital transactions, RegTech solutions are being developed to address cybersecurity threats, particularly in financial services. This includes using blockchain for secure transaction recording and identity verification.

Example - A notable example is Darktrace, which utilizes AI to provide cybersecurity solutions that help organizations preemptively identify and respond to cyber threats. This demonstrates the practical application of RegTech in enhancing compliance and security measures.

Recent Launches

- **Aereve's AI-Powered Compliance Solutions** - In 2024, Aereve launched its AI-based Anti-Money Laundering (AML) and Know Your Customer (KYC) compliance solutions, which utilize advanced machine learning algorithms to enhance regulatory processes. Aereve's products, E2AML and E2KYC, are designed to improve name and transaction screening, significantly reducing false positives and enhancing the efficiency of compliance checks.
- By leveraging natural language processing, these solutions can interpret and analyse names across multiple languages, addressing a common pain point in compliance. This innovative approach not only streamlines compliance workflows but also helps organizations meet stringent regulatory requirements more effectively, showcasing the potential of AI in the RegTech space.

Partnerships and Collaborations

- **Engage Hub and the RegTech Association** - Partnerships are crucial for the growth of the RegTech sector in the USA. Engage Hub recently announced its partnership with the RegTech Association, aiming to streamline compliance in an increasingly complex regulatory landscape. This collaboration is part of Engage Hub's commitment to helping organizations adapt to global regulatory considerations.
- By joining forces, Engage Hub and the RegTech Association are dedicated to driving innovation and supporting organizations in navigating regulatory challenges. This partnership exemplifies how industry players can work together to enhance the adoption of RegTech solutions and foster a culture of compliance across sectors. Working together like this helps us share what we know and develop special solutions that fit the needs of financial businesses.

Aereve Recognised as Rising Star for Sanctions & Name Screening Solution

Reporting by Editors

**Insights by RegAI**

- Aereve's E2AML E2KYC system has been awarded for its advanced capabilities in screening customers against sanctions and watchlists, effectively handling both Romanised and native Chinese characters to enhance alert quality and risk management.
- The solution incorporates natural language processing and features such as automatic alert discounting, blended language rules, and coverage for native Japanese Kanji, which collectively improve screening performance and reduce false positive rates.
- Financial institutions in the Greater Bay Area are adopting Aereve's technology to mitigate risks associated with cross-border business, highlighting its significance in maintaining regulatory compliance standards within the financial industry.

Aereve was recognised for its ability to handle both Romanised and native Chinese characters in screening

This award recognises solutions that enable financial institutions to screen customers against lists of sanctioned individuals and entities, politically exposed persons (PEPs), and other relevant watchlists such as those maintained by law enforcement, regulators and other government agencies.

Aereve was recognised for its E2AML E2KYC system, an advanced solution that leverages natural language processing (NLP) for screening and cross-border KYC assessments. The platform stands out for its ability to handle both Romanised and native Chinese characters (rather than transliteration) in name screening and transaction screening, enabling financial institutions to improve alert quality and risk management decision-making. The solution can also discount alerts automatically with blended language rules, screen news media and social media using native Chinese characters, and has been extended to also cover native Japanese Kanji.

The solution provides a threshold analyser for financial institutions to use to test different threshold settings to fine-tune their screening systems and improve performance. In addition, Aereve enables firms to assess their English and Chinese characters' fuzzy logic capabilities natively in their existing screening systems to benchmark performance against peers. These capabilities ultimately help to enhance the effectiveness of screening systems and lower false positive rates.

Judges on the Regulation Asia awards panel said the solution's emphasis on native Chinese character screening make it "stand out from other providers". It is noted that a number of respectable financial institutions are already using the solution to "mitigate risks associated with conducting cross-boundary business in the Greater Bay Area".

About the Regulation Asia Awards for Excellence 2023

ANTI-MONEY LAUNDERING

09:59 PM 4th November 2024 GMT+08:00

Citibank HK & Aereve Jointly Awarded Banking Industry Collaboration of the Year

Reporting by Editors

C

Insights by RegAI

- Citibank Hong Kong and Aereve received the Banking Industry Collaboration of the Year award for their joint efforts in enhancing anti-money laundering and know-your-customer processes, particularly for clients with Chinese names in the digital assets sector.
- The collaboration resulted in a dual-system interface that utilises GenAI-based on-chain off-chain analytics and Google search insights, significantly improving compliance capabilities and reducing false negatives in AML screenings.
- This partnership, supported by the Hong Kong Monetary Authority, exemplifies a pioneering approach to compliance in the banking sector and sets a new benchmark for AML innovation, highlighting the importance of cross-industry collaborations in addressing regulatory challenges.

Citibank Hong Kong and Aereve were jointly awarded *Banking Industry Collaboration of the Year* at the *7th Regulation Asia Awards for Excellence* on 4 November 2024.

Presented in the *Banking, Risk and Integrity* category, the *Banking Industry Collaboration of the Year* award honours initiatives that bring together a diverse range of stakeholders to address industry challenges, improve operational efficiencies, and drive regulatory advancements.

The collaboration between Citibank Hong Kong and Aereve (team members including Andre Leung, Hao Ma, Arnold Chan and Winson Wong) centred on enhancing anti-money laundering (AML) and know-your-customer (KYC) processes, particularly within the digital assets space and for clients with Chinese names. The partnership significantly improved the bank's compliance capabilities by developing a dual-system interface that integrates GenAI-based on-chain off-chain AML KYC analytics and Google search insights, enhancing accuracy and reducing false negatives in AML screenings. With the support of the Hong Kong Monetary Authority (HKMA), Aereve's specialisation in multilingual processing for Chinese characters further strengthened AML efforts, allowing Citibank Hong Kong to meet its compliance goals while boosting automation and efficiency.

"Citibank Hong Kong and Aereve's partnership demonstrates a pioneering approach to compliance and collaboration in the banking sector," remarked the judging panel at the Regulation Asia Awards. "Their commitment to leveraging advanced language processing and analytics highlights a forward-thinking model for AML innovation, benefiting not only Citibank's clients but also raising the standards for the industry as a whole."

"Citibank Hong Kong's collaboration with Aereve has set a new benchmark for partnerships in AML innovation, particularly in the complex digital asset space," added Bradley Maclean, Co-founder of Regulation Asia and Chair of the Awards Committee. "Their combined efforts to integrate GenAI-based on-chain off-chain AML KYC analytics and Google search insights exemplify the kind of approach needed to bolster resilience and transparency in today's financial landscape."

This award underscores the critical importance of cross-industry partnerships in driving effective risk mitigation and operational resilience across Asia's banking sector. Citibank Hong Kong and Aereve's collaboration not only strengthens the region's AML infrastructure but also serves as a model for how partnerships can address specific compliance challenges in the evolving digital economy.
